

## Neuro-of the rules of CBSA. No. 60 NEURO-NORMS (NEURO-NORM)

In connection with new year holidays, our online pharmacy will not talk 31.12.2016 for 02.01.2017 and 06.01.2017 for 09.01.2017 inclusive. All applications left in this day will be processed on the next working day. Happy New Year and merry Christmas

**THE COMPOSITION AND FORM OF ISSUE caps.**  
conturn. unit. pkg. No. 10 No. 20 No. 60 Other ingredients lactose monohydrate Aerosil magnesium stearate. No. UA36850101 from 01.09.2010 until 01.09.2015

**PHARMACOLOGICAL PROPERTIES Neuro-Norms combination drug.** Active components of the drug piracetam is a cyclic derivative of GABA and Cinnarizine a selective calcium channel antagonist. Piracetam is a nootropic means acting on the brain improves cognitive function such as learning ability memory attention and mental work capacity. Mechanisms of the influence of the drug on the Central nervous system several changes of speed of propagation of excitation in the brain enhancing metabolic processes in nerve cells by improving the microcirculation through its influence on the rheological properties of blood without causing a vasodilator effect. Improves communication between the cerebral hemispheres and the synaptic conductance in neocortical structures. After prolonged use of the drug in patients with reduced functionality of the brain, there is improvement in cognitive functions of attention. Cinnarizine inhibits the contraction of cells of smooth vascular muscles by blocking calcium channels. In addition to direct calcium antagonism reduces contractile effect of vasoactive substances such as norepinephrine and serotonin by blocking their receptor-controlled calcium channels. Blockade of the CA input to cells depends on the type of tissue the result activate connection action with no effect on BP and HR. Cinnarizine may further improve inadequate circulation by increasing the elasticity of the membrane of erythrocytes and decrease blood viscosity. Increases cellular resistance to hypoxia. Cinnarizine inhibits stimulation of the vestibular system resulting in inhibited movement and other Autonomous disorders. Cinnarizine prevents the occurrence of acute attacks of vertigo.

**TESTIMONY adults.** Supportive treatment for symptoms cerebrovascular origin, including impaired memory and thinking function of the mood irritability, reduced concentration of attention. Supportive therapy for symptoms of labyrinthine disorders including vertigo tinnitus nystagmus nausea vomiting the syndrome menera. Prevention of motion sickness. Prevention of migraine. Children. Treatment dyslexia in children under the age of 8 years in combination with other
